Re: 2015 IDDE Data

Frederick County is providing the additional IDDE screening data in relation to section 5.3.1 of Frederick County's 2015 Annual Report submission.

The County is continuing its effort to improve historical data. The originally reported number of 141 IDDE screenings in the narrative section of the report was based on a total query for dry weather screenings. Due to a backlog in data entry, some new development facilities have yet to be properly documented in GIS, so some of these inspected outfalls do not currently exist in the submitted MDE database. The amended number of IDDE screenings for the 2015 annual report is 113, with 3 follow-up inspections as referenced in the amended database, attached.
